

Task: Simple Blog System

1-Database Setup:

- The system relies on a database named blogdb.
- It contains two tables: admin_users and posts.

2-User Interaction:

- Registration: Users can register by accessing the project via the route (http://localhost/Blog_System/admin/login.php#signup).
- Login: Registered users can log in by visiting (http://localhost/Blog_System/admin/login.php).
- Post Display: Upon login, users are presented with a page displaying posts.
- Post Details: Clicking on any post opens its details on a separate page.

3-Admin Features:

- Dashboard Access: Admins can log in and access the admin dashboard via (http://localhost/Blog_System/admin/users.php).
- User Management:

1-Add Users: Admins can add new users.

2-View User Lists: Admins can view lists of registered users.

- Post Management:

1-Display Posts Lists: Admins can view lists of all posts.

2-Manage Posts: Admins have the ability to add, edit, or delete posts.

4-Admin-Only Actions:

- Post Editing and Deletion: Admins have exclusive access to edit and delete posts.
- Access: These options are available within the post details section for admins only.
